Prompt:

I want you to create a Business Process Model and Notation (BPMN) model for the process described below. Return the model in the following format: task nodes as words, parallel gateways as AND, exclusive gateways as XOR, and arcs as ->. You should number the gateways. You may also label the outgoing arcs of an exclusive gateway to denote the decision criterion, like XOR Gateway -> (condition 1) Task. Additionally, provide a mapping of actors to activities, in the format actor: [activity1, ...]

Process description: A small company manufactures customized bicycles. Whenever the sales department receives an order, a new process instance is created. A member of the sales department can then reject or accept the order for a customized bike. In the former case, the process instance is finished. In the latter case, the storehouse and the engineering department are informed. The storehouse immediately processes the part list of the order and checks the required quantity of each part. If the part is available in-house, it is reserved. If it is not available, it is back-ordered. This procedure is repeated for each item on the part list. In the meantime, the engineering department prepares everything for the assembling of the ordered bicycle. If the storehouse successfully reserved or back-ordered every item of the part list and the preparation activity has finished, the engineering department assembles the bicycle. Afterwards, the sales department ships the bicycle to the customer and finishes the process instance.

Response:

Here is the BPMN model you requested:

1. Start -> Receive Order
2. Receive Order -> XOR1 Gateway
3. XOR1 Gateway -> (Reject Order) End
4. XOR1 Gateway -> (Accept Order) AND1 Gateway
5. AND1 Gateway -> Inform Storehouse
6. AND1 Gateway -> Inform Engineering Department
7. Inform Storehouse -> Process Part List
8. Process Part List -> XOR2 Gateway
9. XOR2 Gateway -> (Part Available) Reserve Part
10. XOR2 Gateway -> (Part Not Available) Back-Order Part
11. Reserve Part -> AND2 Gateway
12. Back-Order Part -> AND2 Gateway
13. Inform Engineering Department -> Prepare for Assembly
14. Prepare for Assembly -> AND2 Gateway
15. AND2 Gateway -> Assemble Bicycle

16. Assemble Bicycle -> Ship Bicycle

17. Ship Bicycle -> End

Mapping of actors to activities:

- Sales Department: [Receive Order, Inform Storehouse, Inform Engineering Department, Ship Bicycle]
- Storehouse: [Process Part List, Reserve Part, Back-Order Part]
- Engineering Department: [Prepare for Assembly, Assemble Bicycle]

Prompt:

I want you to create a Business Process Model and Notation (BPMN) model for the process described below. Return the model in the following format: task nodes as words, parallel gateways as AND, exclusive gateways as XOR, and arcs as ->. You should number the gateways. You may also label the outgoing arcs of an exclusive gateway to denote the decision criterion, like XOR Gateway -> (condition 1) Task. Additionally, provide a mapping of actors to activities, in the format actor: [activity1, ...]

Process description: A customer brings in a defective computer and the CRS checks the defect and hands out a repair cost calculation back. If the customer decides that the costs are acceptable, the process continues, otherwise she takes her computer home unrepaired. The ongoing repair consists of two activities, which are executed, in an arbitrary order. The first activity is to check and repair the hardware, whereas the second activity checks and configures the software. After each of these activities, the proper system functionality is tested. If an error is detected another arbitrary repair activity is executed, otherwise the repair is finished.

Response:

Here is the BPMN model you requested:

1. Start -> Receive Defective Computer
2. Receive Defective Computer -> Check Defect and Calculate Repair Cost
3. Check Defect and Calculate Repair Cost -> XOR1 Gateway
4. XOR1 Gateway -> (Costs Acceptable) AND1 Gateway
5. XOR1 Gateway -> (Costs Not Acceptable) End
6. AND1 Gateway -> Check and Repair Hardware
7. AND1 Gateway -> Check and Configure Software
8. Check and Repair Hardware -> Test System Functionality1

9. Check and Configure Software -> Test System Functionality2

10. Test System Functionality1 -> XOR2 Gateway

11. Test System Functionality2 -> XOR3 Gateway

12. XOR2 Gateway -> (Error Detected) AND1 Gateway

13. XOR2 Gateway -> (No Error) End

14. XOR3 Gateway -> (Error Detected) AND1 Gateway

15. XOR3 Gateway -> (No Error) End

Mapping of actors to activities:

- CRS (Customer Service Representative): [Receive Defective Computer, Check Defect and Calculate Repair Cost, Check and Repair Hardware, Check and Configure Software, Test System Functionality1, Test System Functionality2]

- Customer: [Decide on Repair Cost]

Prompt:

I want you to create a Business Process Model and Notation (BPMN) model for the process described below. Return the model in the following format: task nodes as words, parallel gateways as AND, exclusive gateways as XOR, and arcs as ->. You should number the gateways. You may also label the outgoing arcs of an exclusive gateway to denote the decision criterion, like XOR Gateway -> (condition 1) Task. Additionally, provide a mapping of actors to activities, in the format actor: [activity1, ...]

Process description: The Evanstonian is an upscale independent hotel. When a guest calls room service at The Evanstonian, the room-service manager takes down the order. She then submits an order ticket to the kitchen to begin preparing the food. She also gives an order to the sommelier (i.e., the wine waiter) to fetch wine from the cellar and to prepare any other alcoholic beverages. Eighty percent of room-service orders include wine or some other alcoholic beverage. Finally, she assigns the order to the waiter. While the kitchen and the sommelier are doing their tasks, the waiter readies a cart (i.e., puts a tablecloth on the cart and gathers silverware). The waiter is also responsible for nonalcoholic drinks. Once the food, wine, and cart are ready, the waiter delivers it to the guests room. After returning to the room-service station, the waiter debits the guests account. The waiter may wait to do the billing if he has another order to prepare or deliver.

Response:
Here is the BPMN model you requested:

1. Start -> Receive Room Service Call
2. Receive Room Service Call -> Submit Order to Kitchen
3. Receive Room Service Call -> Assign Order to Waiter
4. Submit Order to Kitchen -> Prepare Food
5. Assign Order to Waiter -> Ready Cart
6. Assign Order to Waiter -> Prepare Nonalcoholic Drinks
7. Receive Room Service Call -> XOR1 Gateway
8. XOR1 Gateway -> (Wine or Alcoholic Beverage Included) Give Order to Sommelier
9. XOR1 Gateway -> (No Alcoholic Beverage) AND1 Gateway
10. Give Order to Sommelier -> Fetch and Prepare Alcoholic Beverages
11. Fetch and Prepare Alcoholic Beverages -> AND1 Gateway
12. Prepare Food -> AND1 Gateway
13. Ready Cart -> AND1 Gateway
14. Prepare Nonalcoholic Drinks -> AND1 Gateway
15. AND1 Gateway -> Deliver Order to Guest
16. Deliver Order to Guest -> XOR2 Gateway
17. XOR2 Gateway -> (Has Another Order) End
18. XOR2 Gateway -> (No Other Order) Debit Guest's Account
19. Debit Guest's Account -> End

Mapping of actors to activities:

- Room-Service Manager: [Receive Room Service Call, Submit Order to Kitchen, Assign Order to Waiter, Give Order to Sommelier]
- Kitchen Staff: [Prepare Food]
- Waiter: [Ready Cart, Prepare Nonalcoholic Drinks, Deliver Order to Guest, Debit Guest's Account]
- Sommelier: [Fetch and Prepare Alcoholic Beverages]

Prompt:

I want you to create a Business Process Model and Notation (BPMN) model for the process described below. Return the model in the following format: task nodes as words, parallel gateways as AND, exclusive gateways as XOR, and arcs as ->. You should number the gateways. You may also label the outgoing arcs of an exclusive gateway to denote the decision criterion, like XOR Gateway -> (condition 1) Task. Additionally, provide a mapping of actors to activities, in the format actor: [activity1, ...]

Process description: Whenever a company makes the decision to go public, its first task is to select the underwriters. Underwriters act as financial midwives to a new issue. Usually they play a triple role: First they provide the company with procedural and financial advice, then they buy the issue, and finally they resell it to the public. Established underwriters are careful of their reputation and will not handle a new issue unless they believe the facts have been presented fairly. Thus, in addition to handling the sale of a companys issue, the underwriters in effect give their seal of approval to it. They prepare a registration statement for the approval of the Securities and Exchange Commission (SEC). In addition to registering the issue with the SEC, they need to check that the issue complies with the so-called blue-sky laws of each state that regulate sales of securities within the state. While the registration statement is awaiting approval, underwriters begin to firm up the issue price. They arrange a road show to talk to potential investors. Immediately after they receive clearance from the SEC, underwriters fix the issue price. After that they enter into a firm commitment to buy the stock and then offer it to the public, when they havent still found any reason not to do it.

Response:

Here is the BPMN model you requested:

1. Start -> Select Underwriters
2. Select Underwriters -> Provide Procedural and Financial Advice
3. Provide Procedural and Financial Advice -> Prepare Registration Statement
4. Prepare Registration Statement -> Submit Registration to SEC
5. Submit Registration to SEC -> Check Compliance with Blue-Sky Laws
6. Check Compliance with Blue-Sky Laws -> Await SEC Approval
7. Await SEC Approval -> XOR1 Gateway
8. XOR1 Gateway -> (Approval Received) Firm Up Issue Price
9. XOR1 Gateway -> (Approval Denied) End
10. Firm Up Issue Price -> Arrange Road Show
11. Arrange Road Show -> Receive SEC Clearance
12. Receive SEC Clearance -> Fix Issue Price
13. Fix Issue Price -> Enter into Firm Commitment to Buy Stock

14. Enter into Firm Commitment to Buy Stock -> XOR2 Gateway

15. XOR2 Gateway -> (No Reason Not to Proceed) Offer Stock to Public

16. XOR2 Gateway -> (Reason Found Not to Proceed) End

17. Offer Stock to Public -> End

Mapping of actors to activities:

- Company: [Select Underwriters]

- Underwriters: [Provide Procedural and Financial Advice, Prepare Registration Statement, Submit Registration to SEC, Check Compliance with Blue-Sky Laws, Await SEC Approval, Firm Up Issue Price, Arrange Road Show, Receive SEC Clearance, Fix Issue Price, Enter into Firm Commitment to Buy Stock, Offer Stock to Public]

- Securities and Exchange Commission (SEC): [Approve or Deny Registration]

- Potential Investors: [Participate in Road Show]

Prompt:

I want you to create a Business Process Model and Notation (BPMN) model for the process described below. Return the model in the following format: task nodes as words, parallel gateways as AND, exclusive gateways as XOR, and arcs as ->. You should number the gateways. You may also label the outgoing arcs of an exclusive gateway to denote the decision criterion, like XOR Gateway -> (condition 1) Task. Additionally, provide a mapping of actors to activities, in the format actor: [activity1, ...]

Process description: At the beginning the customer perceives that her subscribed service has degraded. A list with all the problem parameters is then sent to the Customer Service department of TELECO. At the customer service an employee enters (based on the received data) a problem report into system T.. Then the problem report is compared to the customer SLA to identify what the extent and the details of the service degradation are. Based on this, the necessary counter measures are determined including their respective priorities. An electronic service then determines the significance of the customer based on information that has been collected during the history of the contractual relationship. In case the customer is premium, the process will link to an extra problem fix process (this process will not be detailed here). In case the customer is of certain significance which would affect the counter measures previously decided upon, the process goes back to re-prioritize these measures otherwise the process continues. Taking together the information (i.e. contract commitment data + prioritized actions) a detailed problem report is created. The detailed problem report is then sent to Service Management. Service Management deals on a first level with violations of quality in services that are provided to customers. After receiving the detailed problem report, Service management investigates whether the problem is analyzable at the level of their department or whether the problem may be located at Resource Provisioning. In case Service Management assesses the problem to be not analyzable by themselves, the detailed problem report is sent out to Resource Provisioning. If Service Management is sure they can analyze it, they perform the analysis and

based on the outcome they create a trouble report that indicates the type of problem. After Resource Provisioning receives the detailed problem report, it is checked whether there are any possible problems. If no problems are detected, a notification about the normal service execution is created. If a problem is detected this will be analyzed by Resource Provisioning and a trouble report is created. Either trouble report or the normal execution notification will be included in a status report and sent back to Service Management. Service Management then prepares the final status report based on the received information. Subsequently it has to be determined what counter measures should be taken depending on the information in the final status report. Three alternative process paths may be taken. For the case that no problem was detected at all, the actual service performance is sent back to the Customer Service. For the case that minor corrective actions are required, Service Management will undertake corrective actions by themselves. Subsequently, the problem resolution report is created and then sent out to Customer Service. After sending, this process path of Service Management ends. For the case that automatic resource restoration from Resource Provisioning is required, Service Management must create a request for automatic resource restoration. This message is then sent to Resource Provisioning. Resource Provisioning has been on-hold and waiting for a restoration request but this must happen within 2 days after the status report was sent out, otherwise Resource Provisioning terminates the process. After the restoration request is received, all possible errors are tracked. Based on the tracked errors, all necessary corrective actions are undertaken by Resource Provisioning. Then a trouble-shooting report is created. This report is sent out to Service Management; then the process ends. The trouble-shooting report is received by Service Management and this information goes then into the creation of the problem resolution report just as described for ii). Customer Service either receives the actual service performance (if there was no problem) or the problem resolution report. Then, two concurrent activities are triggered, i.e. i) a report is created for the customer which details the current service performance and the resolution of the problem, and ii) an SLA violation rebate is reported to Billing & Collections who will adjust the billing. The report for the customer is sent out to her. After all three activities are completed the process ends within Customer Service. After the customer then receives the report about service performance and problem resolution from Customer Service, the process flow at the customer also ends.

Response:

Here is the BPMN model you requested:

1. Start -> Customer Perceives Service Degradation
2. Customer Perceives Service Degradation -> Send Problem Parameters to Customer Service
3. Send Problem Parameters to Customer Service -> Enter Problem Report in System T
4. Enter Problem Report in System T -> Compare Report to SLA
5. Compare Report to SLA -> Determine Counter Measures and Priorities
6. Determine Counter Measures and Priorities -> Determine Customer Significance
7. Determine Customer Significance -> XOR1 Gateway
8. XOR1 Gateway -> (Premium Customer) Link to Extra Problem Fix Process

9. XOR1 Gateway -> (Non-Premium Customer) XOR2 Gateway

10. XOR2 Gateway -> (Customer Significant) Re-prioritize Measures

11. XOR2 Gateway -> (Customer Not Significant) Create Detailed Problem Report

12. Create Detailed Problem Report -> Send Report to Service Management

13. Send Report to Service Management -> XOR3 Gateway

14. XOR3 Gateway -> (Problem Analyzable) Perform Analysis and Create Trouble Report

15. XOR3 Gateway -> (Problem Not Analyzable) Send Report to Resource Provisioning

16. Send Report to Resource Provisioning -> XOR4 Gateway

17. XOR4 Gateway -> (No Problem Detected) Create Normal Service Execution Notification

18. XOR4 Gateway -> (Problem Detected) Analyze Problem and Create Trouble Report

19. Create Normal Service Execution Notification OR Create Trouble Report -> Create Status Report

20. Create Status Report -> Send Status Report to Service Management

21. Send Status Report to Service Management -> Prepare Final Status Report

22. Prepare Final Status Report -> Determine Counter Measures

23. Determine Counter Measures -> XOR5 Gateway

24. XOR5 Gateway -> (No Problem Detected) Send Service Performance to Customer Service

25. XOR5 Gateway -> (Minor Corrective Actions Required) Undertake Corrective Actions and Create Problem Resolution Report

26. XOR5 Gateway -> (Automatic Resource Restoration Required) Create Restoration Request

27. Create Restoration Request -> Send Request to Resource Provisioning

28. Send Request to Resource Provisioning -> Track Errors and Undertake Corrective Actions

29. Track Errors and Undertake Corrective Actions -> Create Troubleshooting Report

30. Create Troubleshooting Report -> Send Report to Service Management

31. Send Report to Service Management -> Create Problem Resolution Report

32. Create Problem Resolution Report -> Send Report to Customer Service

33. Send Report to Customer Service -> AND1 Gateway

34. AND1 Gateway -> (Task 1) Create Customer Report

35. AND1 Gateway -> (Task 2) Report SLA Violation Rebate to Billing & Collections

36. Create Customer Report -> Send Report to Customer

37. Send Report to Customer -> End

Mapping of actors to activities:

- Customer: [Perceives Service Degradation, Receives Report about Service Performance and Problem Resolution]

- Customer Service: [Receives Problem Parameters, Enters Problem Report in System T, Compares Report to SLA, Determines Counter Measures and Priorities, Determines Customer Significance, Creates Detailed Problem Report, Sends Service Performance to Customer Service, Creates Customer Report, Sends Report to Customer]

- Electronic Service: [Determines Customer Significance]

- Service Management: [Receives Detailed Problem Report, Investigates Problem, Performs Analysis and Creates Trouble Report, Prepares Final Status Report, Determines Counter Measures, Undertakes Corrective Actions and Creates Problem Resolution Report, Receives Troubleshooting Report, Creates Problem Resolution Report]

- Resource Provisioning: [Receives Detailed Problem Report, Checks for Possible Problems, Analyzes Problem and Creates Trouble Report, Receives Restoration Request, Tracks Errors and Undertakes Corrective Actions, Creates Troubleshooting Report

Prompt:

I want you to create a Business Process Model and Notation (BPMN) model for the process described below. Return the model in the following format: task nodes as words, parallel gateways as AND, exclusive gateways as XOR, and arcs as ->. You should number the gateways. You may also label the outgoing arcs of an exclusive gateway to denote the decision criterion, like XOR Gateway -> (condition 1) Task. Additionally, provide a mapping of actors to activities, in the format actor: [activity1, ...]

Process description: The process is initiated by a switch-over request. In doing so, the customer transmits his data to the customer service department of the company. Customer service is a shared service center between the departments Sales and Distribution. The customer data is received by customer service and based on this data a customer data object is entered into the CRM system. After customer data has been entered it should then be compared with the internal customer data base and checked for completeness and plausibility. In case of any errors these should be corrected on the basis of a simple error list. The comparison of data is done to prevent individual customer data being stored multiple times. In case the customer does not exist in the customer data base, a new customer object is being created which will remain the data object of interest during the rest of the process flow. This object consists of data elements such as the customers name and address and the assigned power gauge. The generated customer object is then used, in combination with other customer data to prepare the contract documents for the power supplier switch (including data such as bank connection, information on the selected rate, requested date of switch-over). In the following an automated check of the contract documents is carried out within the CIS (customer information system) in order to confirm their successful generation. In case of a negative response, i.e. the contract documents are not (or incorrectly) generated, the causing issues are being analyzed and resolved. Subsequently the contract documents are generated once again. In case of a

positive response a confirmation document is sent out to the customer stating that the switch-over to the new supplier can be executed. A request to the grid operator is automatically sent out by the CIS. It puts the question whether the customer may be supplied by the selected supplier in the future. The switch-over request is checked by the grid operator for supplier concurrence, and the grid operator transmits a response comment. In the case of supplier concurrence the grid operator would inform all involved suppliers and demand the resolution of the conflict. The grid operator communicates with the old supplier and carries out the termination of the sales agreement between the customer and the old supplier (i.e. the customer service (of the new supplier) does not have to interact with the old supplier regarding termination). If there are not any objections by the grid operator (i.e. no supplier concurrence), customer service creates a CIS contract. The customer then has the chance to check the contract details and based on this check may decide to either withdraw from the switch contract or confirm it. Depending on the customers acceptance/rejection the process flow at customer service either ends (in case of withdrawal) or continues (in case of a confirmation). An additional constraint is that the customer can only withdraw from the offered contract within 7 days after the 7th day the contract will be regarded as accepted and the process continues. The confirmation message by the customer is therefore not absolutely necessary (as it will count as accepted after 7 days in any way) but it can speed up the switch process. On the switch-date, but no later than 10 days after power supply has begun, the grid operator transmits the power meter data to the customer service and the old supplier via messages containing a services consumption report. At the same time, the grid operator computes the final billing based on the meter data and sends it to the old supplier. Likewise the old supplier creates and sends the final billing to the customer. For the customer as well as the grid operator the process ends then. After receiving the meter data customer service imports the meter data to systems that require the information. The process of winning a new customer ends here.

Response:
Here is the BPMN model you requested:

1. Start -> Receive Switch-Over Request

2. Receive Switch-Over Request -> Enter Customer Data into CRM System

3. Enter Customer Data into CRM System -> Compare Data with Internal Database

4. Compare Data with Internal Database -> XOR1 Gateway

5. XOR1 Gateway -> (Data Errors) Correct Errors

6. XOR1 Gateway -> (No Errors) Create New Customer Object

7. Create New Customer Object -> Prepare Contract Documents

8. Prepare Contract Documents -> Automated Check of Documents in CIS

9. Automated Check of Documents in CIS -> XOR2 Gateway

10. XOR2 Gateway -> (Documents Incorrectly Generated) Analyze and Resolve Issues, then Regenerate Documents

11. XOR2 Gateway -> (Documents Correctly Generated) Send Confirmation Document to Customer

12. Send Confirmation Document to Customer -> Send Switch-Over Request to Grid Operator

13. Send Switch-Over Request to Grid Operator -> XOR3 Gateway

14. XOR3 Gateway -> (Supplier Concurrence) Resolve Conflict with Suppliers

15. XOR3 Gateway -> (No Supplier Concurrence) Create CIS Contract

16. Create CIS Contract -> Customer Checks Contract

17. Customer Checks Contract -> XOR4 Gateway

18. XOR4 Gateway -> (Customer Withdraws) End

19. XOR4 Gateway -> (Customer Accepts OR 7 days passed) Continue Process

20. Continue Process -> Receive Power Meter Data and Final Billing from Grid Operator

21. Receive Power Meter Data and Final Billing from Grid Operator -> Import Meter Data to Relevant Systems

22. Import Meter Data to Relevant Systems -> End

Mapping of actors to activities:

- Customer: [Transmits Data to Customer Service, Checks Contract, Withdraws or Accepts Contract]

- Customer Service: [Receives Customer Data, Enters Data into CRM System, Compares Data with Internal Database, Corrects Errors, Creates New Customer Object, Prepares Contract Documents, Sends Confirmation Document to Customer, Creates CIS Contract, Receives Power Meter Data and Final Billing from Grid Operator, Imports Meter Data to Relevant Systems]

- CRM System: [Stores Customer Data, Supports Automated Check of Contract Documents]

- CIS (Customer Information System): [Supports Automated Check of Contract Documents, Sends Switch-Over Request to Grid Operator]

- Grid Operator: [Checks Switch-Over Request, Resolves Conflict with Suppliers if needed, Sends Power Meter Data and Final Billing to Customer Service and Old Supplier]

- Old Supplier: [Receives Conflict Resolution or Termination of Sales Agreement, Creates and Sends Final Billing to Customer]
